

60,000psi Calibration Capability

Nan Gall Technology Limited, the Aberdeen-based downhole electronics design and manufacturing company has announced that it is now capable of calibrating pressure gauges up to 60,000psi.

With the acquisition of a new dead-weight tester, it is now possible to apply accurate pressures of up to 60,000psi.

Nan Gall Technology products are calibrated to stringent specifications as part of the manufacturing process and many customers utilise the calibration facility for on-going calibrations at pre-specified periods during the product's working life cycle.

Nan Gall's calibration facility (including a fully automatic dead-weight tester) can be traced back to the National Physical Laboratory Standards and is equivalent to UKAS (formerly NAMAS) specifications.

Specifications of the 60,000psi DWT:

Accuracy **0.008% of Reading**

Class A No. **0591**

NPL Ref: **MP03/02P1169**

In addition to calibrating Nan Gall gauges, the company will undertake 3rd party calibrations – please contact sales@nangall.co.uk for further details of this service.
